CH-368
SKIPJACK "MARY W. SOMERS"
St. Mary's City
Private

1904

The "Mary W. Somers" is a Chesapeake Bay skipjack built in 1904 at Mearsville, Virginia. She is a sailing vessel with sloop rig and has a registered length of 41.9 feet and a beam of 14 feet. Her overall length, including bowsprit, is 57 feet, and she draws 3.5 feet of water. The standing rigging is old style, <u>i.e.</u>, shrouds are secured by deadeyes and lanyards. The small cabin sleeps two to three crew. Below deck is a hold for cargo, divided by the centerboard well. A longhead below the bowsprit includes a decorated and carved trail board of traditional motif in gold leaf and colored enamels.

Rising costs and dwindling oyster harvests forced Chesapeake watermen to seek a replacement for the large and expensive bugeye in the 1890's. The economy of construction and the working characteristics of the skipjack made it very successful for the short period before the gasoline engine was generally accepted on the Bay. When oysters weren't being harvested, the skipjacks were used for hauling fresh produce, lumber, and livestock to market in Baltimore and Washington. The working skipjack fleet presently consists of about 25 boats, a number fast dwindling from the thousands once operated. The "Mary W. Somers" is not one of the working fleet.

STATEMENT OF SIGNIFICANCE

The significance of the skipjack, "Mary W. Somers", as well as the rest of the skipjack fleet, lies in their unique survival as the last "working sail" in North America.

A brief history of the development of the skipjack can be synopsized from M.V. Brewington's book, Chesapeake Bay, A Pictorial Maritime History. Of the half dozen or so sailing vessels to be developed on the Bay since its settlement in the seventeenth century, the skipjack was the last to come into being. Its design, taken from the skiffs used to work crab-trot lines on the Lower Eastern Shore, resulted from an economic depression in the early 1890's and a simultaneous drop in oyster production. The early skipjacks were economical boats, being comparatively easier and cheaper to build and in good weather requiring only one man to operate both the boat and the dredge. The skipjacks gradually increased in size until they were large enough to take their catch to the cities rather than selling it to the "buyboats." These larger vessels were built by professional shipbuilders rather than by the watermen.

The skipjack, among other sailing craft, saw year-round service in commerce until the advent of better roads and freight hauling by truck. Lumber, farm products, and coal were transported to and from ports around the bay area. Until World War II, it was common to see twenty-five or more skipjacks laden with watermelons and cantaloupes at Long Dock and at Fells Point in Baltimore. Washington and Georgetown also received the goods of commerce by this means of transportation.

Today the skipjacks are used for the dredging of oysters in the Maryland waters of the Chesapeake, from November through April.
